INVESTMENT PHILOSOPHY

We identify and locate quality municipal bonds with superior yields, on a national basis, while concentrating on principal safety and return. We build portfolio consisting of individual bond issues in a separately managed account providing customized portfolios to our clients. This allows us to provide the best proportions of current yield, upside potential and downside protection. Our portfolios are diversified on a national basis and strive to avoid municipal credits which are faltering. We believe that active diversified separate account management may provide opportunities to reduce risk and maximize after-tax returns.

INVESTMENT PROCESS

Through research and market knowledge, we exploit inefficiencies in the municipal market by purchasing bonds that are undervalued, under priced, or misunderstood. Complicated bond issues are managed with the use of advanced analytics, and our portfolios are stress tested. Credit rating changes are monitored on a daily basis. We sift through many offerings on a daily basis and can bid direct on those bonds that are for sale in the market place in an attempt to buy our positions wholesale, oftentimes eliminating 2 or 3 middlemen.

PORTFOLIO STRUCTURING

High Quality Portfolio	We buy bonds within the investment grade spectrum that offer yield enhancement opportunities.
Intermediate Duration	Flexible portfolio structure allows us to shift duration in reaction to ever changing interest rate environments.
National Portfolios – With Home State Sensitivity	Can custom tailor portfolios for clients that are looking for a particular credit rating and/or avoidance of particular states. Our goal is to maximize after-tax return.
Portfolio Turnover Reflects Active Management Philosophy	We actively manage the portfolio's principle value in an attempt to protect and enhance income, with an eye towards tax efficiency.
Portfolio Structure	Our multifaceted strategy produces a portfolio of municipal bonds from throughout the U.S. and its territories, with current average maturities of less than 12 years, resulting in less exposure to interest rate risk than investments with longer average maturities.
